

Maxim[®] Operators

Exceptional Maxim Operators provide maximum performance to open and close larger windows with 33% less effort than most operators. These operators feature a sealable housing to reduce water and air infiltration without the use of caulk or additional sealant. An optional folding handle can be added. Stainless steel packages are available for demanding coastal applications. Developed as a system with Maxim Hinges and Locks to ensure maximum efficiency.

Maxim[®] Hinge System

The Maxim low friction casement and awning hinge system is designed for use on residential and commercial windows, and is concealed between sash and frame for low maintenance and clean exterior aesthetics. Made with non-magnetic stainless steel track, heavy gauge steel arms, brass stud, and stainless steel reinforced thermoplastic shoe. Sash arms are coated with Truth's E-Gard[®] coating for enhanced corrosion protection. Stainless steel models are also available.

Truth[®] Sash Control Devices

Truth offers a wide array of sash control devices to address most special situations you may encounter. Friction Adjustors, Limit Devices, Support Arms, as well as other items are available to allow us to customize a solution for your next project.

Our Westco Commercial Aluminum Projection Series Windows were designed around the Maxim[®] Hardware System from Truth Hardware, the North American leader in the design and manufacture of quality operating hardware for the window industry. Truth Hardware has been in business since 1955 and West Window has used their products with great success for many years.
